4.Create a program to count number of character in the source file?

Code:

```
import java.io.FileReader;
import java.io.IOException;

public class Main {
    public static void main(String[] args) {
        try {
            FileReader reader = new FileReader("data.txt");

            int ch;
            int characters = 0;
            int lines = 0;

            while ((ch = reader.read()) != -1) {
                characters++;

                if (ch == '\n') {
                    lines++;
                }
            }

            reader.close();

            System.out.println("Number of characters: " + characters);
            System.out.println("Number of lines: " + lines);
        }
    }
}
```

```

    } catch (IOException e) {

        System.out.println("File not found.");

    }

}

}

```

Output:

The screenshot shows a web browser window with the URL `onlinegdb.com/online_java_compiler?utm_source=chatgpt.com#`. The browser has tabs for 'SIMATS Online Lab', 'Online Java Compiler - online', and 'Ask Gemini'. The Java code editor contains the following code:

```

1 import java.io.FileReader;
2 import java.io.IOException;
3
4 public class Main {
5     public static void main(String[] args) {
6         try {
7             FileReader reader = new FileReader("data.txt");
8
9             int ch;
10            int characters = 0;
11            int lines = 0;
12
13            while ((ch = reader.read()) != -1) {
14                characters++;
15
16                if (ch == '\n') {
17                    lines++;
18                }
19            }
20        }
21    }
22 }

```

The output console shows the following results:

```

Number of characters: 87
Number of lines: 2

...Program finished with exit code 0
Press ENTER to exit console.

```

The Windows taskbar at the bottom shows the system clock as 19:02 on 24-08-2026, with a temperature of 30°C and weather 'Mostly cloudy'.
